

## МиГ-25РБТ

## Советский самолет-разведчик

В конце 60-х годов в ОКБ А.И.Микояна был разработан первый в мире истребитель-перехватчик со скоростью полета 3М – МиГ-25.

В это же время был сконструирован высотный разведчик-бомбардировщик, получивший название МиГ-25РБ.

Модификация МиГ-25РБТ с усовершенствованным радиоэлектронным оборудованием производилась в 1980-1982 г.

Эти не имеющие аналогов самолеты-разведчики состояли на вооружении BBC СССР (впоследствии – России), а также экспортировались в Ирак и Ливию.

### ВНИМАНИЕ!

Перед сборкой внимательно прочитать руководство по монтажу. Каждая деталь пронумерована. Соблюдать последовательность монтажа. Необходимые рабочие инструменты: нож и напильник для зачистки деталей; резиновая лента, клейкая лента и зажимы для сушки белья для прижимания склеиваемых деталей. Детали из пластика очистить в растворе мягкого моющего средства и высущить на воздухе для того, чтобы краска и переводные картинки лучше прилипали. Перед приклеиванием проверить, подходят ли детали; клей наносить экономно. Хром и краску удалить с поверхностей склеивания. Небольшие детали покрасить перед тем, как они будут удалены из рамок. Краску необходимих хорошо просушить, только после этого продолжать сборку. Каждую соответствующую переводную картинку отдельно вырезать и примерно на 20 секунд окуть в теплую воду. На обозначенном месте картинку отдельть от бумаги и прижать промокательной бумагой.

# MiG-25RBT Soviet Reconnaissance Plane

IIn the end of 60s the Mikoyan Design Bureau was developed the world's first interceptor fighter with speed of Mach 3 – the MiG-25.

At the same time high reconnaissance-bomber modification was designed, which was called the MiG-25RB.

The improved modification MiG-25RBT with updated avionics was produced in 1980-1982.

These perfect reconnaissance planes served in Soviet (later – Russian) Air Force, and were delivered to Iraq and Libya.

#### CAUTION

Read the instructions thoroughly prior to assembly. Each component is numbered. Adhere to specified sequence of assembly. Tools required: knife and file for removal of components from frame; rubber bond, adhesive tape and clothes pegs for clamping components together after applying adhesive. Clean plastic components in a mild detergent solution and allow to air-dry so that paint and transfers adhere better. Prior to applying adhesive, check to see whether the components fit together; apply adhesive sparingly. Remove chrome and paint from the contact surfaces. Paint small components before removing them from the frame. Allow paint to dry well, and only then continue to assemble. Cut out each transfer individually and immerse in warm water for approx. 20 seconds. Slide transfer off paper and into designated position, then press on with blotting paper.
